WEBERT[®]
Made in Italy with Passion

Italian Concept, Design and Manufacture

La nostra storia ruota intorno alla passione. Innanzi tutto quella che in Webert mettiamo nel nostro lavoro di squadra, che consiste nel creare linee che esprimono eleganza, dando spazio ad un design giovane, moderno ed emergente. Ma la passione per ciò che realizziamo ci porta anche a nutrire un assoluto rispetto per chi sceglie i nostri prodotti. Ai quali il nostro cliente chiede raffinatezza, affidabilità, funzionalità e il giusto rapporto tra ciò che acquista e ciò che spende. È dal 1975 che questi valori ci guidano. Hanno fatto di Webert un'azienda che, nell'arredobagno italiano, significa innovazione, qualità e rigore. Sono le caratteristiche che ritrovate anche oggi nella nuova gamma di prodotti presentata in queste pagine.

The history of Webert revolves around passion. Primarily the passion that we at Webert put into our teamwork, which involves creating lines that embody elegance while providing scope for young, modern and emerging designs. From this passion for our creations comes total respect for the people who choose our products. They demand refinement, reliability, functionality and value for money. These have been our guiding values since 1975. These values have transformed Webert into a hallmark for innovation, quality and precision in the world of Italian bathroom fittings. And you can still find all these admirable qualities today in our new range of products presented here.

Acciaio 316L Sano, duraturo, atossico

L'acciaio inossidabile non contiene tracce di piombo e non rilascia nichel, materiali che possono essere causa di allergie e arrecare danni alla salute. L'acciaio inossidabile viene trattato solo meccanicamente, lucidato o spazzolato per conferire la sua naturale lucentezza e bellezza, non subisce nessun processo galvanico di cromatura o artificiale, procedimenti chimici che possono essere causa di inquinamento.

L'acciaio inossidabile garantisce una eccezionale durata per la sua resistenza sia meccanica che chimica. In ambienti ad elevata aggressività l'acciaio mantiene inalterate le proprie caratteristiche di inossidabilità garantendo durata e funzionalità.

L'acciaio AISI 316L risulta il migliore in assoluto per inossidabilità, stabilità della struttura e durata, possedendo le migliori caratteristiche per la gestione dell'acqua potabile.

Stainless steel 316L Healthy, long-lasting, atoxic

Stainless steel does not contain traces of lead and does not release any nickel, both substances that can cause allergies and harm to your health. Stainless steel is only treated mechanically, polished or brushed to give it its natural light and beauty, it does not undergo any galvanizing chromium process, chemical processes that can be the cause of pollution.

Stainless steel guarantees an exceptional life span, because of its solidity, both mechanical and chemical. The characteristics of stainless steel, and AISI 316L in particular, remain the same also in hard environments guaranteeing long-lasting performance over the years.

AISI 316L Steel has the best characteristics in terms of stain resistance, durability and solidity, and guarantee drinking water.

VERCHROMUNG / CROMADO

La qualità dei rivestimenti superficiali è di fondamentale importanza per garantire nel tempo la durata del prodotto; per ottenere un ottimo trattamento l'intero processo galvanico di cromatura è realizzato internamente all'azienda con tecnologie moderne e costantemente aggiornate. L'impianto di depurazione, collegato a quello di produzione, utilizza sistemi a "scarico zero" che limitano l'impatto ambientale al minimo.

The quality of the coating surfaces is very important to guarantee the working life of the product: in order to obtain a perfect result all galvanic processes are completely carried out inside the factory, using modern technologies being continuously updated. The depuration plant is connected to the manufacturing machinery and uses "zero waste" methods thus reducing the environmental impact.

La qualité des revêtements des surfaces est très importante pour garantir dans le temps la durée du produit: pour obtenir un excellent traitement, tout le processus galvanique de chromage est réalisé totalement auprès de notre usine avec des technologies modernes et mises à jours. L'implantation de dépuración relié à celui de la production utilise des systèmes avec « déchargement zéro » qui limitent au minimum l'impact sur l'environnement.

Die Qualität der oberflächigen Beschichtung ist sehr wichtig, damit ist die Dauer des Produktes garantiert; um ein sehr gute Behandlung zu haben, wird der komplette galvanische Verchromungsprozess innen der Firma mit modernen und aktualisierten Technologien durchgeführt. Der Reinigungsprozess, mit der Produktionsanlage verbunden, benutzt „Null-Abfluss“ Methoden, die die Umweltauswirkungen beschränken.

The most exclusive taps of Webert collection are produced with materials of higher quality than those used for the brass products; we indeed use the INOX AISI 304 L steel, which is the most suitable for drinking water.

La robinetterie la plus exclusive de la collection Webert utilise des matériaux avec des caractéristiques supérieures par rapport au laiton et en particulier nous utilisons l'acier INOX AISI 304, qui est le plus indiqué pour l'eau potable.

Die mehr exklusive Armaturen von Webert Kollektion verwenden hochwertigere Rohmaterialien als Messing. Ins besonders wird Inox Edelstahl AISI 304 L verwendet, der für Trinkwasser empfohlen ist.

PARTE INTERNA INCASSO / BUILT-IN PRODUCTS / ROBINETTERIE ENCASTREE / UNTERPUTZ-ARMATUREN / GRIFERÍAS EMPOTRADA

Tutti i sistemi da incasso della gamma Webert hanno una doppia protezione: una parte è in polistirolo e protegge il rubinetto dal muro per evitare che la condensa s'infiltri lungo la parete e provochi macchie o distacco del rivestimento. Una seconda protezione è esterna e serve per proteggere le parti in finitura durante i lavori di installazione e di finitura del rivestimento.

All built-in systems of the Webert range have a double protection: a part is made of polystyrene and protects the tap from the wall, in order to avoid the condensate seeps into the wall, causing damp patches or the detachment of the coating. A further protection is external and is used to protect the finished parts during the installation or the coating finishing.

Tous les systèmes encastrés de la gamme Webert ont une double protection: une partie en polystyrène protège le robinet et empêche que le condensat s'infilte à travers les murs et soit cause de tâches ou de détachement du revêtement. Une deuxième protection est extérieure et sert pour la protection des parties finies pendant les travaux d'installation et du finissage du revêtement.

Alle die Unterputz-Systeme von Webert Kollektion haben einen Doppelschutz: ein Kasten aus Polystyrol, der die Armatur vom Wand schützt, um zu vermeiden, dass das Kondenswasser sich der Wand entlang infiltriert und Flecken oder Beschichtungsablösungen verursacht. Ein zweite Außenschutz, der die Armaturausführung während der Installation und bzw. Beschichtungsarbeiten schützt.
